THE GLENOLIA

LEARNING TOGETHER

Build your height chart

One accurate scale. Eight A4 tiles. Adult assembly.

1. Print single-sided at actual size (100%).

Select A4 portrait. Turn off Fit, Shrink, Scale to fit and borderless enlargement. Do not change orientation or page size.

2. Check before cutting.

Measure the bar below with a physical ruler. Its end marks must be 100 mm apart. Also check that 10 cm on a ruler tile is exactly 100 mm. If either is wrong, correct the print settings before use.

3. Keep tiles in order, 1 to 8.

Trim to the artwork boundary at the top and sides; trim tile 8 at its 0 cm floor line. Match each next tile's first 20 mm to the previous tile's last 20 mm. Align the identical A-G crosses and ruler marks. Do not leave a gap or add the overlap twice.

4. Assemble, then mount at floor level.

Tape the reverse securely with an adult. The 0 cm line, not the bottom paper edge, meets the floor. Check a known 100 cm interval on the assembled chart before using it.

5. Make it a voluntary learning activity.

Stand comfortably without shoes only if appropriate and safe. Use a level, lightweight marker with adult help. Bodies grow differently. Do not rank learners, make health judgements or publish their heights.

100 mm calibration bar

Banner size: 180 × 1900 mm. Measuring scale: 0-180 cm. Each centimetre is exactly 10 mm in the source. A-G crosses identify the seven joins. Full-size and tiled versions use the same native vector geometry.

THE
GLENOLIA

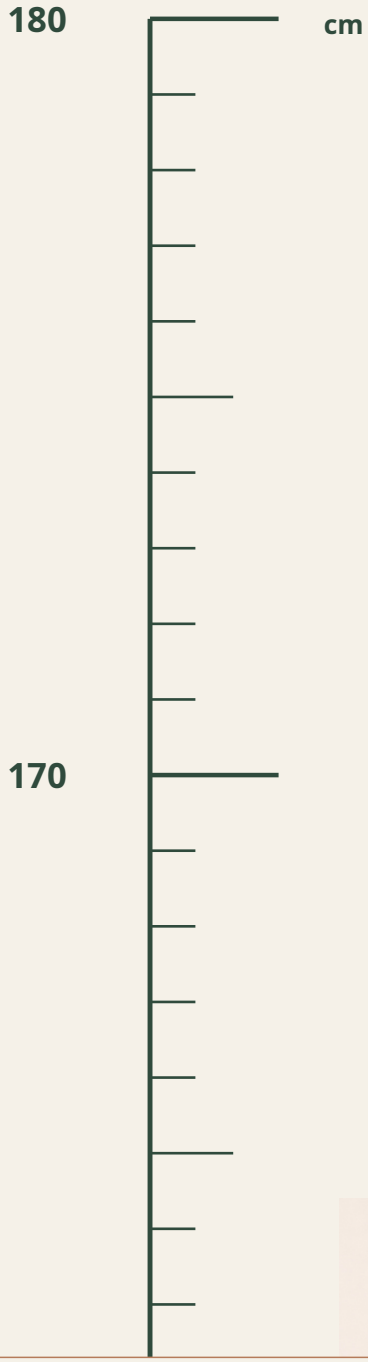

Growing curiosity

We grow at different rates. Measure to practise, never to rank.

Print at actual size (100%). Check this bar:
