THE GLENOLIA

LEARNING TOGETHER

Pip's plant observation journal

Plant / model code: _____ | Observer / group code: _____

Use a teacher-selected plant, picture or labelled model. Keep the same method. For a real plant, agree a height reference, such as soil surface to the highest living point. A picture without a scale cannot give real plant height. Do not disturb a living plant.

Date / time	Height cm	Method / reference	Care observed	Sketch / notes

Leave an unobserved value blank. Care is decided by an adult or the agreed growing plan; a character picture is not a plant-care instruction or actual farm data.

THE GLENOLIA

LEARNING TOGETHER

Compare, then explain

Same plant, two observation dates. Draw what you can actually see.

Date: _____

Date: _____

My idea about change

I think... because the record shows...

A limitation or next question

What is uncertain? What could we observe next?

Different plants grow differently. A single measurement does not explain every cause of change.
